

## Support Vector Model (SVM) in voice dataset

Running SVM with default hyperparameter.	Accuracy Score
SVC (default)	97.63%
Linear kernel	97.79%
RBF kernel	97.63%
Polynomial kernel	95.90%
<b>Sigmoid Kernel</b>	<b>79.33%</b>

Models	Accuracy Score
Random Forest	97.63%
SVM	97.63%
XGBoost	97.63%

Random Forest	
Test accuracy score	97.63%
Train accuracy score	100%
Overfitting	2.37%

XGBoost	
Test score	97.48%
Train score	100%
Overfitting	2.5200%

XGBoost CV Only	
Train Score	100%
Test Score	97.48%
CV	98.22%
Overfitting	2.5200%

Accuracy Scores			
Kernels	With CV only	Param with CV with its best param	Only Param
Linear	96.86%	97.06% with C value = 0.1	97.79% with best C value = 1
RBF	96.59%	96.81% with gamma value = 0.01	98.11% with best gamma value = 0.03
Polynomial	94.50%	94.51% with best degree = 3	95.90% with best degree = 3

Kernels	With Param only	Train Score	Test score	Overfitting	IS it overfitting?	Generalizes well?
Linear	Param + CV	97.79%	97.79%	0.000	No	Yes
	Only CV	97.63%	97.06%	0.006	No	Yes
		97.60%	96.88%	0.007	No	Yes
RBF	With Param only	98.42%	98.11%	0.003	No	Yes
	Param + CV	97.66%	96.81%	0.009	No	Yes
	Only CV	98.48%	96.59%	0.019	No	Yes
Polynomial	With Param only	96.69%	95.90%	0.008	No	Yes
	Param + CV	97.06%	94.51%	0.026	No	Yes
	Only CV	97.06%	94.51%	0.026	No	Yes

check overfitting for only CV case	
Scenario	Conclusion
Train >> CV	<input checked="" type="checkbox"/> Overfitting
Train ≈ CV	<input checked="" type="checkbox"/> Good fit
Both low	<input checked="" type="checkbox"/> Underfitting

By using Grid search technique we found the best parameter	C: 0.9, 'degree': 3, 'gamma': 0.05, 'kernel': 'poly'
--	---

Notes

Train accuracy → "Did I memorize?"

Test accuracy → "Can I generalize?"

CV accuracy → "Am I consistent?"
